

Early Journal Content on JSTOR, Free to Anyone in the World

This article is one of nearly 500,000 scholarly works digitized and made freely available to everyone in the world by JSTOR.

Known as the Early Journal Content, this set of works include research articles, news, letters, and other writings published in more than 200 of the oldest leading academic journals. The works date from the mid-seventeenth to the early twentieth centuries.

We encourage people to read and share the Early Journal Content openly and to tell others that this resource exists. People may post this content online or redistribute in any way for non-commercial purposes.

JSTOR is a digital library of academic journals, books, and primary source objects. JSTOR helps people discover, use, and build upon a wide range of content through a powerful research and teaching platform, and preserves this content for future generations. JSTOR is part of ITHAKA, a not-for-profit organization that also includes Ithaka S+R and Portico. For more information about JSTOR, please contact support@jstor.org.

Hellmayr on the Ornithology of Western Colombia.¹—While the bird life of northern Colombia is becoming fairly well known there is still much to be learned regarding that of other parts of this interesting country especially the southern and central portions. The present paper is a welcome contribution covering as it does portions of the province of Choco, including the tropical San Juan valley and the Pacific slope of the Western Cordillera near its headwaters.

The basis of Mr. Hellmayr's paper is a collection of about 700 specimens obtained by Mr. Mervyn G. Palmer during 1908 and 1909, representing 201 forms. There are valuable critical notes and discussions of the details of distribution of the various species as well as a chapter of 'Conclusions' in which it is shown that many species of this region are common to N. W. Ecuador while a smaller number are Central American. Twenty-seven are listed as peculiar to Western Colombia. *Calospiza gyroloides bangsi* from Chiriqui, *C. g. catharinae* from S. E. Peru, *Arremon aurantirostris occidentalis* from W. Colombia and *Myrmotherula surinamensis pacifica* from W. Colombia are described as new.—W. S.

Berlepsch's Revision of the Tanagers.²—This is a valuable work of reference for students of neotropical birds, especially since we have had no monographic review of the Tanagers since Dr. Sclater's volume XI of the Catalogue of Birds in the British Museum, published twenty-five years ago. Count von Berlepsch lists 555 forms using binomial names for 403 and trinomials for 152. The exact reference and type locality are given for all accepted names and synonyms, and a full list of localities is quoted under each species while type species are given for all generic names. Critical remarks on many of the species are given as an appendix to the main text, while matters of classification and nomenclature are dealt with in the introduction. The author disagrees with Ridgway's action in removing the Pitylinæ to the Fringillidæ and in placing *Hemispingus* with the Mnioiltidæ and prefers to keep them with the Tanagers, while *Iridophanes* he would exclude from the latter group keeping it with the Coerebidæ. *Calyptophilus* he regards as a member of the Ampelidæ. In matters of nomenclature he finds himself unable to adopt such generally current forms as *Calospiza nigriviridis nigriviridis* preferring the binomial for the typical race, nor does he follow original misspellings of geographical names.—W. S.

Rivista Italiana di Ornitologia.³—Under this title appears the first
